Dog-eaten passport cancels Wis. boy's trip to Peru

EAU CLAIRE (AP) — A Wisconsin teenager using a classic excuse for evading schoolwork missed a class trip to Peru despite his tale being true: The dog ate his passport.

Officials at Chicago's O'Hare airport told 17-year-old Jon Meier the chewed-on document was fine, but authorities in Miami rejected it and wouldn't let him board the southbound aircraft.

His family's 1-year-old golden retriever, Sunshine, chewed a corner of the document, obscuring some numbers. Meier couldn't get another passport in time to join the trip with his Spanish class from Eau Claire North High School. The 12-day trip ended Monday.

Meier says he can't blame anyone, not even Sunshine: "I love her too much."

Man tries to rob hotel with a butter knife

RAPID CITY (AP) — Police arrested a man they said tried to rob a hotel around 6 p.m. on Sunday with a butter knife. The clerk refused to give the man any money, and he left the hotel on foot. Police said about an hour later they spotted a man matching the description given by the clerk.

Officers arrested a 34-year-old man on a robbery charge. They said they also recovered the knife.

Preschool science: learning at the park!

By Charlina Stewart

Every time children play in the rain, watch leaves fall from trees, or inhale fragrances from flowers, they are experiencing the wonders of science.

"Young kids are filled with curiosity, and they are constantly developing theories about how the world works" says preschool program director Tammie Donald. Introducing science into the things youngsters do each day is what encourages them to explore, experiment, observe, predict, reason, and analyze the things around them.

Integrating science into familiar settings can bring the magic of science to life, and encourage preschoolers to flex their scientific thinking skills.

Here are some fun ways to introduce your mini-adventurer to science at the park!

Bug off

There's no shortage of bugs in the world. Even though these creepy crawly critters can be annoying at times, each of them benefits the earth in some way.

And young children get a kick out of watching bugs in action. Bug boxes are perfect for observing bugs because they have built in magnifying glasses that allow children to view insects in a contained area.

So next time you visit the park

let your child scour the ground for interesting bugs to put in his bug box and observe.

Use a piece of paper or a pair of plastic tweezers (usually included with the bug box) to gently place the bugs inside of the bug box.

Once the lid on the box is secure, your child can observe the critters in action.

Share any knowledge you have about the particular type

of bug your child is viewing. And encourage him to discuss his observations. Also, don't harm the bugs during your experiment; when the activity is complete, release them.

Hunting we will go

A science scavenger hunt at the park is the perfect way to encourage youngsters to explore their environment.

Create a list of things that are easily found outside such as

birds, butterflies, grass, rocks, twigs, leaves, pinecones, and ants. Each time your child discovers one of the items on the list, he can check it off.

Not only does this encourage exploration, it can serve as a precursor to writing, and promote reading and literacy in youngsters.

Bird watcher

Your preschooler can get up close and personal with one of

nature's most fascinating creatures by doing a little bird watching. But if your child is going to watch birds, he has to lure them in — and simple pinecone bird feeders will do the trick.

Make the bird feeders at home, take them to the park, and hang them in a nearby tree. In order to get a curbside view of the birds, your preschooler will need a pair of child-sized binoculars.

You'll need a pair of binoculars as well — this will enable you and your child to see the birds at the same time, and make discussing the birds' colorings, movements, and markings easier to do.

A closer look

Take your preschooler on a stroll around the park and let him use a small bag to collect interesting items such as blades of grass, twigs, dirt, and rocks. Take the bagged items over to a picnic table and dump them out.

Have your child use a magnifying glass to take a closer look at the collection.

What are some of the different textures, colors, and shapes of the items? When your child is finished observing, he can use a digital camera to take snapshots of the items, and add them to a photo album or scrapbook.

Put it on paper

Your young child can use a personalized journal to document his scientific findings — no writing necessary.

He can simply keep tabs of his adventures by drawing pictures," suggests preschool teacher Christie Graham.

Kids are naturally enthusiastic about learning. And when science lessons are fun, interactive, and integrated into kids' everyday experiences, it reinforces their natural desire to learn, and helps them gain a better understanding of what science is all about.
